Young CEDA evening

Working in the Dredging Industry
(Werken in de baggersector)

June 2, 2014

19.00-20.30h + drinks, TU Delft Aula (Senaatzaal)

On Monday June 2, 2014, the Dutch section of Young CEDA (Central Dredging Association, www.dredging.com) will organize a symposium to inform students and young professionals about working in the dredging industry. Several enthusiastic speakers are invited to present their experiences in the first years of their career and the available opportunities in the sector. Besides their positive experiences, they will also elaborate on typical pitfalls.

We selected three speakers, each with a different background and education. They've all entered the dredging industry from different perspectives and already made some career moves. Obviously we will conclude the evening with some informal drinks, allowing you to discuss the presentations and career opportunities with the present CEDA members and your fellow students or colleagues.

We hope to see you on Monday June 2, 2014 from 19.00h in the TU Delft Aula, Senaatzaal. (Mekelweg 5, Delft).

Prof. Cees van Rhee will host the evening and the following speakers will present their experiences in the dredging sector, including some interesting project examples:

Jort van Wijk (Research Engineer with IHC Merwede & TU Delft PhD):
“Science rocks! – Research as the first step in your dredging career”

Wouter Ockeloen (Senior Engineer with Van Oord):
“Engineering in practice”

Jaap van Thiel de Vries (Program Manager with Boskalis):
“Sustainability in Hydraulic Engineering”

Registration:
To register, please send an email to Roderik Hoekstra (roderik.hoekstra@deltares.nl) and include your name and employer or study specialization.

1 Presentations can be given in English
